

## FlashJack™

## CONICAL SPLIT FLASHINGS

## PVC Low Slope Systems

## OVERVIEW

FlashCo's FlashJack PVC Closed Conical Pipe Flashings are Factory Certified prefabricated flashings made from 60 mil reinforced PVC membrane. They are designed to encircle common cylindrical penetrations where typical "closed" cones are unable to pass over obstructions like railings, crossbars, caps, collars, and other fittings. FlashCo's Conical Split Flashings come in a variety of standard sizes, each designed to fit a range of penetration diameters while maintaining a riser height of at least 6" or greater with a 1" overlap at the split.

## Custom Sizes and Colors Made to Order

## INSTALLATION

FlashJacks shall be installed in accordance with the recommendations and specifications of the roofing material manufacturer.

1. Prepare all welding surfaces by cleaning with PVC membrane cleaner.
2. Place flashing over penetration and mark where top of pipe is telegraphed on riser and remove.
3. Approximately ½" above the mark, cut-to-size the top opening.
4. Again, place flashing over penetration and mark top of flashing on pipe and remove.
5. Apply a bead of water cut-off mastic (provided by others) completely around the penetration just below the mark.
6. Replace flashing over the penetration and heat weld the base flange to the deck.
7. Install stainless steel hose clamp at top of flashing riser providing constant compression on the sealant.
8. After the flashing has cooled, probe welds to verify a secure bond.

## FEATURES AND BENEFITS

- Up to 60% labor savings compared to field fabrication
- Available for NDJ and discretionary jobs
- Fit multiple sizes with a single flashing

## SAVING THE CONTRACTOR TIME

- FlashCo strives to ship 90% of orders within 1-3 days after purchase orders are placed
- 6 size options to fit multiple size penetrations
- Get off the roof sooner
- Reduce installed costs
