

FlashVent™ EYEBROW WALL VENT

PVC Low Slope Systems

OVERVIEW

FlashCo's Eyebrow Wall Vents are prefabricated gravity vents commonly used on 45-90 degree parapet brace walls to allow free owing air between the vented area and exterior of the structure. Often membrane is installed up walls making waterproofing of typical wall vents challenging, but FlashCo's innovative design allows the vent to be securely fastened to studs in the wall through the coated metal front flange prior to heat welding the pre-attached membrane flange. The vent's eyebrow style hood extends below the vent opening, and is designed to prevent the possibility of wind driven rain from entering the structure.

FlashCo's Eyebrow Wall Vents are constructed of PVC coated metal with a reinforced PVC membrane flange. Eyebrow Wall Vents are designed for ease of application and require no field fabrication, thereby greatly reducing labor costs. Standard sizes are 18" (50 square inches Net Free Area) and 24" (120 square inches Net Free Area).

INSTALLATION

FlashVents shall be installed in accordance with the recommendations and specifications of the roofing material manufacturer.

1. Prepare all welding surfaces by cleaning with PVC membrane cleaner.
2. Secure vent sub base to parapet wall, over appropriate sized hole, using proper fasteners.
3. Heat weld or adhere the base flange to the wall membrane.
4. After the flashing has cooled, probe welds to verify a secure bond.

FEATURES AND BENEFITS

- Installs in minutes, no field fabrication required
- Blocks wind driven rain
- Fastens through coated metal flange

SAVING THE CONTRACTOR TIME

- **FlashCo's Brand Promise is Speed:** shipping 90% of orders within 3 days.
- 24/7/365 Online Contractor Portal and additional time-saving tools
- Most orders delivered on FlashCo's own delivery trucks
- Get off the roof sooner
